

Procinct Security

PROFESSIONAL SERVICES

"Information technology pervades all aspects of our daily lives, of our national lives. Its presence is felt almost every moment of every day, by every American. It pervades everything from a shipment of goods, to communications, to emergency services, and the delivery of water and electricity to our homes. All of these aspects of our life depend on a complex network of critical infrastructure information systems. Protecting this infrastructure is critically important.

Disrupt it, destroy it or shut down these information networks, and you shut down America as we know it and as we live it and as we experience it every day. We need to prevent disruptions; and when they occur, we need to make sure they are infrequent, short and manageable. This is an enormously difficult challenge. It is a technical challenge, because we must always remain one step ahead of the hackers."

Tom Ridge
Director of Homeland Security
October 9, 2001

Procinct Security™ Professional Services

Procinct Security provides a comprehensive suite of security services to meet your company's security needs. Our business-oriented security solutions help you address your specific concerns, identify threats to your infrastructure, and mitigate vulnerabilities in order to protect your valuable corporate resources.

- **System Hardening** - We develop and deploy custom automated procedures that remove vulnerable and unnecessary services, patch security holes, and tighten access controls to secure your systems.
- **Network Vulnerability Testing** - We perform an exhaustive examination of targeted areas of your company's network infrastructure to verify that existing security measures actually work, identify weaknesses, and provide you with prioritized recommendations for securing your network.
- **Penetration Testing** - Using the results from Network Vulnerability Testing, we attempt to compromise your systems, as a potential attacker would, to see how much and what type of information can actually be divulged.
- **eCommerce Security Audit** - We will perform a comprehensive examination of your network infrastructure to assess the risks associated with your business, identify the vulnerabilities in your security posture, determine the weaknesses in your web application, and monitor your infrastructure on an on-going basis using our ProSentry™ Internet security monitoring service.
- **Security Architecture Review** - We will assess your current IT infrastructure for design and architectural weaknesses and help you improve or design a new security architecture.
- **Independent Verification and Validation** - We independently verify your security architecture, policies, procedures, implementation, and/or previous security audit to ensure that all requirements were satisfied and validate whether the deliverables meet your company's security objectives.
- **Incident Response** - Our experts are available 24 hours a day to respond to your security incidents quickly, appropriately and effectively to help recover your systems to a fully operational state as quickly as possible.
- **Risk Assessment** - We will help your company identify assets, determine their risks, evaluate their magnitude, and identify the safeguards needed to mitigate them.
- **Web Application Security Review** - We will ensure that your web application code is written with security in mind and is protected against known threats and vulnerabilities.
- **Policies and Procedures Development** - To help build a solid security foundation, we will develop systematic policies and procedures, establish compliance testing and train your employees in them.

Proven success with Procinct Security

We automate paying attentionSM. Procinct Security Corporation is dedicated to developing cutting edge information security solutions that help clients across all industries secure their Internet infrastructure. Procinct Security, provider of the ProSentry™ Internet Security Monitoring service, is comprised of senior software architects and trustworthy security professionals who hold sensitive security clearances and CISSP and SANS GIAC security certifications. Procinct Security also provides a wide range of security consulting services.

Procinct Security is a charter member of the Center for Internet Security and an independent member of the BDO Seidman Alliance. For more information email info@procinct.com or sales@procinct.com.
